Watermarking and the numerous image adjustments are not the only tools available in Lightroom 5. In fact, the application has several screenshot tools which allow you to write comments about the image captured, such as the number of pictures taken, the date taken, the location of capture, the weather when shooting, and the like. In the new release, a major addition is that Lightroom now creates a database of your imported images. All the imported images are made available to the program. The database can be accessed through the Library module. The entire library, including that of images you have imported from an external source, can be displayed as thumbnails or large images. The initial selection of importing can happen via drag-and-drop or, in case you wish to keep the images transferred directly to Lightroom, you can upload your new images. Moreover, you can create a full size preview of the image and use it as a reference. If you are using Lightroom for watermarking, the introduction of a new feature is evident in the Update module. The program now comes equipped with the ability to automatically process JPEG images in batches. When I first installed Photoshop Sketch, I instantly noticed that it was faster than the previous version of Adobe Photoshop, Photo has been around a long time, and I was impressed when it continues to evolve. Adobe has aimed to improve Speed of Processing for Photoshop Sketch. Adobe Sketch is the reader and editor of Photo and Photoshop layers, and so the features needed for processing layers are all built-in. It's consistent, efficient, and fast.
