Adobe's latest update also brings many long-awaited new features to Photoshop. Highlights include ten new non-destructive crop types, the ability to crop your photo to the center of your canvas, as well as the ability to swap left-handed and right-handed canvases without re-saving. One of the coolest new features is Curves, a feature that will allow you to alter tonal values on an image layer by layer without having to adjust one or more colors. In addition to these new features, we've now got a new tab tool, a new ruler, and a new radial-graphic filter. Some of the other highlights include a new Energy tab that allows for stronger adjustments, a simplified Filter Menu, a new tool that calculates area of an image's blurred area, a new Variable Rendering Engine, a refinement to sharpening, an improved ability to edit type, a new ability to mask layers and vectors, and more. **Using Adobe Camera Raw, which comes as a free download, I set the white balance for the image's final output. This was especially important as I was shooting color front-lighting portraits in a harsh, cold and overcast light.** As I mentioned earlier, when it comes to color accuracy, there are often two very different Java-based apps available for the same thing. If you are not sure which one to use, however, I would suggest using the native Lightroom option. It seems to work consistently for me, because otherwise your final colors may vary. But if you have the time, use the Java-based app you prefer. Fortunately, RAW editing is pretty straightforward.

Adobe Photoshop has a robust undo/redo system. You're likely to see the redo button in layers being very important as a way to 'redo' any change to the image which was made rather than just the last change (layer, mask, etc.). Photoshop has a fairly robust and intelligent system for layer management. This is at least possible with layers, and for masks; however, as previously noted, the undo/redo system is not necessarily perfect. The undo/redo, as well as the layer management, system is also made more complicated by having the text layer (which has a cursor and alphabetical text) placed on the same layer as the image, making it much harder to go through the undo/redo list.
